                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           27;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to a polynucleotide sequence encoding a cynomologous monkey P-glycoprotein (FGP), and an allelic variant of the PGP protein. PGP, also known as multiducy transporter, MDRI is a member of the ABC transporter superfamily. The enzyme serves as an efflux pump exporting small molecules across the cell membrane. The invention includes a cynomologous monkey (Macaca fascicularis) PGP coding sequence and protein, and also that of an allelic variant. The PGP polynucleotide sequence is useful for increasing PGP transporter activity in a cell. Antisense sequences of the cDNA are useful for inhibiting PGP transport activity in a mammalian cell. They may also be used for increasing the bloavailability of a drug. The present sequence represents the cynomologous monkey P-glycoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated nucleic acid encoding cynomologous monkey P-glycoprotein (PGP) and homologous PGP polypeptides are useful for predicting bloavailability of compound and increasing PGP transporter activity in cell -

The present invention describes a recombinant or isolated nucleic acid (1), derived from a prokaryotic gene, which encodes at least a specific and/or functional part of a transporter protein (TP), or its derivatives, which has functional and/or structural similarity with the Pulycoprotein (PS) encoded by the human multidrug resistance (MDR)1 gene. The present sequence represents the human MDR1 protein, derived from MDR1-n and MDR1-cas shown in the specification in flughts 1. (1) is used to express recombinant proteins; its fragments of related DNA. The protein produced, or cells expressing them, are used to determine if substances can inhibit, or avoid, MDR proteins, cand in a screening method for identifying compounds that inhibit transport of cytotoxic substances from cells. Also, cells with a transmembrane protein, especially where expressed from (1), can provide mechanisms of action of PG.
                                                                                                                                          Human; multidrug resistance P-glycoprotein; MDR1; prokaryotic homologue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Prokaryotic homologue of human multiple drug resistance protein - used to screen for compounds that inhibit, or avoid, drug resistance
                                                                                                                                                                                                                                                                                                                                                                                                                                        ×
                                                                                                                 Human multidrug resistance P-glycoprotein MDR1
                                                                                                                                                                                                                                                                                                                                                                                                                                        Venema

cells are useful in bone marrow transplattation (to reconstitute hamaropoietic systems in patients who have undergone chemotherapy or radiation therapy) and in ex vivo gene therapy of genetic defects in cells derived from haematopoietic stem cells, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or leukaemia. The modified cells can also be used to identify factors involved in regulating proliferation and differentiation in haematopoietic stem cells. Haematopoietic stem cells that express MDR-1 will be protected against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Multidrug resistance; MDR-1; P-glycoprotein;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents human wild-type multidrug resistance protein MDR-1. MDR-1 is a transmembrane efflux pump, responsible for the export of drugs from certain cells, particularly cancer cells. Wild-type MDR-1 shows increased resistance to etoposide and decreased resistance to vinca alkaloids compared with a mutant form (AAYSB187) where the Gly at position 185 is replaced by Val. The invention relates to transducing heamatopoietic stem cells with nucleic acid encoding an MDR protein and culturing the modified cells. The modified haematopoietic stem

chemotherapeutic agents, so can be engrafted while the patient is undergoing chemotherapy. Expansion of (rare) haematopoietic stem cells provides sufficient cells to permit standard blochemical analysis. Overexpression of MDR-1 allows cytokine-driven expansion of haematopoietic stem cells by at least 10-fold compared with a maximum

This invention relates to a polynuclectide sequence encoding a cynomologous monkey P-glycoprotein (PGP), and an allelic variant of the GPP protein. PGP, also known as multidrug transporter. MDR1 is a member of the ABC transporter superfamily. The enzyme serves as an efflux pump exporting small molecules across the cell membrane. The invention includes a cynomologous monkey (Macaca fascicularis) PGP coding sequence and protein, and also that of an allelic variant. The PGP polynucleotide sequence is useful for increasing PGP transporter activity in a cell. Antisense sequences of the cDNA are useful for inhibiting PGP transport activity in a mammalian cell. They may also be used for increasing the bloavailability of a drug. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel isolated nucleic acid encoding cynomologous monkey P-glycoprotein (PGP) and homologous PGP polypeptides are useful for predicting bioavailability of compound and increasing PGP transporter activity in

/note="Yeoforcy pHOSI; Site_lib Bat; Constructed at The
Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond (Librk,
C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
/75450.), The DNA was mechanically sheared to give a
fight size distribution (-2 kb). The v + 1 method used for
tight size distribution (-2 kb). The v + 1 method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
whole genome shotgun sequencing projects. In Genome
Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barell, Oxford University Press, 1999)."

                                                     /note="Vector: pBluescript SK-; Site_1: EcoRI; Site_2: Xhoi; CDNA was prepared from polyA+ enriched RNA. The cDNA was directionally ligated into the Unizap RN vector from Stratagene and packaged using Gigapack III Gold packaging extracts. Plasmids containing CDNA inserts were excised from the recombinant lambda-Zap phage using Ex-assist helper phage and propagated in SOLR cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        897 bp DNA linear GSS 14-NOV-2000 genomic, DNA sequence.

CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN.

Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand CDNA was primed with a primer prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the primer adapter of sequence [5'

/clone_lib="Entamoceba histolytica Stockville, MD.
Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of E. histolytica using a method described by Clark and Diamond (Clark,
C.G., and Diamond. L.S. (1993) Entamoceba histolytica: a method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a tight size distribution (-2 kb). The v + i method used for the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for whole genome shorgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barall, Oxford University Press, 1999)."
Eukaryota: Entamoebidae: Entamoeba.

Genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond (Clark,
C.G., and Diamond L.S. (1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
77:450). The DNA was mechanically sheared to give a
tight size distribution (-2 kb). The v + I method used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        871 bp DNA linear GSS 14-DEC-2000 BYKB16TF Entamoeba histolytica Sheared DNA Entamoeba histolytica genomic, DNA sequence.

/clone_weetor: pH051; Site_1: Bst 1; Constructed at The
Institute for Genomic Research (TIGR), Rockville, WD.
Genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond (Clark,
C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a
tight size distribution (-2 kb). The v + i method used for
the library construction is described in detail in Smith,
H.O. and Venter. J.C. (Making small insert librarles for
whole genome shotgun sequencing projects. In Genome
Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barell, Oxford University Press, 1999)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ij

Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond, L.S.
(1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
/7:500.) The DNA was mechanically sheared to give a
flight size distribution (-2 kb). The v + 1 method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
whole genome shotyun sequencing projects. In Genome
Sequencing: A practical Approach, eds. M. Vaudin and B.
Barell, Oxford University Press, 1999)."

Parasitolytica: a method for isolate identification Exp. Parasitolytica: a method for isolate identification by expression of the library construction is described in detail in Smith, H.O. and Venter. J.C. (Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing. A practical Approach, eds. M. Vaudin and B. Barell, Oxford University Press, 1999)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ä

/clone_lib="Entamoeba histolytica Sheared DNA"
/note="weetor: pHoS1; Site_1: Bst !; Constructed at The
Institute for Genomic Research (TIGR). Rockville, MD.
Genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond (Clark,
C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a
tight size distribution (-2 kb). The v + 1 method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
whole genome shotgun sequencing projects. In Genome
Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barell, Oxford University Press, 1999)."

Clones are derived from the Entamoeba histolytica HMI:IMSS sheared

DNA library

Seq primer: M13-Reverse

Class: shotgun

High quality sequence start: 19

High quality sequence start: 839.

Location(Qualifiers)
